

# DVT Thrombectomy Inari ClotTrievers

December 16, 2020

**Dr. Vincent Flanders, MD**  
Interventional Radiology  
St. Vincent

## Patient/Procedural Notes

- Age: 78
- Swelling and pain of right leg for 2 weeks
- Significant clot confirmed via duplex US and venogram
- US guided access of right popliteal vein
- .035" wire advanced into IVC
- Sheath landing site ballooned with an 8x40 durado balloon
- ClotTrievers sheath placed into right popliteal vein
- ClotTrievers catheter advanced past thrombus, engaged, and 3 passes yielded significant clot
- 1 10mm balloon of remaining thrombus
- 1 Venovo stent in right iliac vein
- Final venogram confirmed much improved flow (images)
- **0 lytics used**
- No ICU stay required
- Estimated blood loss 20cc
- 70 min case time

## Pre Imaging

## Post Imaging

## Thrombus Removed
